

DC DRIVES PRODUCTS

DC DRIVE PRODUCTS family offers to our customers a wide range of devices that can be use in any DC Motor applications.

SCS designs and produces DC Drives since 1977 and can guarantee to its customers a deep support in building successful solutions and fixing startup and tuning phases.

If you need to **go DC**, **SCS** is the right partner for you.

CT38

2/4 QUADRANT FULL CONTROLLED THREE-PHASE DRIVES FOR D.C. MOTORS – SERIES CT

APPLICATIONS

Unidirectional and bidirectional drives for medium and large power d.c. motors. Constant power and constant torque speed adjustment for spindles, CNC's and machine tools.

Processing lines for plastic and rubber materials, extruders, pinch roll trains, winding machines, mixers, calendars.

Metal wire and sheet working machines, shears, reels, cutters, wire drawing benches, spooling machines, stranding machines, rolling mills, forging machines, flattening machines.

Paper product making and packaging machines, paper mills, packaging industries. Printing machines, including silk-screen printing, offset, rotogravure and continuous machines.

Voltage and/or current regulators for controlling processes, RL loads, galvanic baths, electrophoresis.

MAIN FEATURES

Full standardization design philosophy.

Removable personalization board. Standard control boards without calibration.

Optimum power, size, performance and cost ratio.

Direct connection to mains with wide tolerance ($\pm 20\%$) and random phase sequence.

Very wide current range from 30A to 2700A; built-in voltage changes for mains 220, 380, 440, 480 V $\pm 20\%$.

Galvanic isolation, also in armature feedback, with compensation Rxl.

Adjustable speed relay (0.5 to 120%)

OK relay cumulative of all the protective devices "DRIVER OK".

Thermal overload prealarm relay (I2t). Electronic thermal images.

Provision for setting (1.5x In per 30 s.) and disabling overload.

Commands for controlling references and functions, with LED signalling handled by the PLC or process controls.

Analog current and speed outputs. Differential proportional amplifier, configurable by the user.

Transmission outside of the status of the protective devices, optically isolated parallel and serial.

Standard built-in protective devices (controls of mains and internal power supplies, pulse suppression, solid-state and/or electromechanical fuse alarm, overvoltages, tacho generator failure, field circuit checking, overtemperature, external alarm available) all with LED signalling.

1.1. GENERAL DESCRIPTION

The compact modular construction uses standard PC boards for the entire range, with high level of integration of the components mounted. Thanks to this it is possible to have a series with practically all the most frequently used system auxiliary functions.

Through external commands (contacts or PLC commands signalled by LED's), it is possible to have full control over the switching of the reference signals, Forward/Reverse commands, selection of inputs and use of the ramp. The Forward/Reverse of the reference signals and JOG presettings are interlocked.

All protective devices are memorized individually. Moreover they are signalled by LED's, with external communication in optically isolated parallel form, or transmission in serial form.

The PC board is standard without adjustment.

The personalization and calibration board contains all the adjustments and presettings with an amplifier which can be configured as required.

A special thermal image calculation circuit allows both overloading (3 to 30 s.) as well as boosted continuous service, which is useful for current regulators in "pull mode" with unit torque (torque controls).

In order to afford full protection to the drive, all fuses necessary for the power section are installed internally (SCR bridge, ventilation, field circuit, power supply).

The drive is built to IEC standards 146, 146A, 146.2, VDE110b, IEC 494-CT 22-2 and the ANIE recommendations. Components with UL, CSA and VDE mark are used. There is provision for mounting fuses to BS88 part 4-1976 and IEC 269 part 4 (standard) and type XL-F and SF to UL standards (upon request). The drive is rated for mains power supplies up to 500V $\pm 10\%$.

1.2. INTERNAL PROTECTIVE DEVICES

- Main fuses (3) for the power bridge (version CT..T/VT) with fuses on the dc side (external) only when used as an inverter rectifier (unidirectional, 2 quadrants)
- Branch fuses (6) for version CT..TR/VTR (reversible, 4 quadrants)
- Fuses for the field bridge (2)
- Fuses for the fan (2) when provided (only for CT...V)
- Fuses for the control circuit (3)
- Checking of firing of each single SCR, solid-state fuse alarm, with provision for optional internal and/or external additional electromechanical checking (AF), provision for disabling.
- Pulse suppression for uncontrollable d.c. overcurrent (200%) (SI).
- Check for mains tolerance missing phases, mains failures presence of $-15V$ (CR).
- Check for overvoltages and efficiency of peak voltage killer filter (only for high power ratings) (FS)

- Checking for tacho generator failure (ADT).
- Checking of field circuit by means of adjustable transducer (MCE)
- Thermal overload protection through thermal element on the radiator and calculation of thermal image limiting (TH)
- Signalling of prealarms through relays at 80% of time limit (I2t).

2.0. CALIBRATION AND PERSONALIZATION BOARD (T-RT2, T-RT2R)

Implemented with passive and/or calibration components (apart from the auxiliary amplifier). The board is with plug-in connector and can be replaced by a more sophisticated uP board. settings through trimmers Nmax, Nmin, JOG, + a, - a, + Imax, - Imax, AZZ, Rxl, D-VEL, P-VEL, I-VEL, G2, P-COR, I-COR, In, TI2t, IE, VO.

Available presettings AR/DT, JCR/JSR, CR/SR, - E1/E1

8 - position dip switches for programming and/or disabling certain protective devices or commands.

3.0. ADJUSTMENT BOARD RT2-RTR2

5.0. SPECIFICATION

Standard supply voltage for control circuit, 3 x 220, 380, 440, 480 \pm 20% with built-in voltage change (200 \pm 10%, 235 \pm 10%, 415 \pm 10%, 420 \pm 15%, 460 \pm 15%, 500V \pm 10%).

Set of 3 fuses with random sequence.

Standard power circuit supply voltage (3x 415V) \pm 10% max.

Max voltage 3x500V \pm 10% (upon request, for CT44..CT48..)

Frequency 50Hz \pm 4% or else 60 Hz \pm 4% (set by SW6)

Forced ventilation: 220V single phase 50/60 Hz only for types CT..VT/VTR

Operating temperature range: 0°C to 45°C (effective) (inside the control panel) for unventilated models, at nominal current (35°C for ventilated models)

Max permissible operating temperature : 65°C with down grading of 1.25% for each degree from 45° (35°) up to 65°C.

Storage temperature range : - 25°C to + 85°C.

Relative humidity 50% without condensate

Altitude 1000 m above sea level, with down grading of 1.2% for every 100m above this altitude.

Max form factor 1.05

Field circuit supply voltage 2x415V \pm 10% max; complete with fuses, transducer, protective devices. Single phase full bridge.

Max current 12A (20A upon request)

Adjustment characteristic : double closed loop in series, for current (TA) and speed (DT) or voltage (VA)

Adaptive characteristic adjustable with trimmers (P-COR, I-COR) for current loop, D-VEL, P-VEL, I-VEL for speed loop).

Typical range of adjustment 1/200 with tacho gen. Feedback

1/20 with armature feedback and RX1 compensation.

Static speed error with tacho feedback with transient finished and excluding the speed transducers errors :

- Auxiliary protection available (external trip); provision for use as signalling or memorized stop (ET)

N.B.: all protective devices are sent at output through connector X3, individually through OPTO and in serial form for connection to receiver RX8.

Fully standard, without any calibration

Provision for back panel mounting of an optional board in E1 format (100x160).

4.1. POWER SECTION

Full controlled three phase SCR bridge (6SRC's) for the CT..T/VT version and with 6+6 SCR's in anti-parallel (CT..TR/VTR) complete with fuses, filters, single RC filters and protection against overvoltage and dv/dt.

SCR firing board (ZT6/ZT12) adjacent to the modules.

Board with filters, auxiliary fuses and isolating transducers for armature and field.

\pm 0.01% of max speed for load variation from 5% to 100%;

\pm 0.05% of actual speed for mains fluctuations of 20%;

\pm 0.01% of actual speed for each degree in ambient

temperature change from 0° to 65°C.

Internal reference voltage \pm 10V \pm 2% typical, 20mA max

Reference potentiometer : standard value 5K (from 1K to 10K)

Input impedance of reference signal : 44K \pm 2% (0.23 mA typical)

Positive logic commands (standard + 24V \pm 20% 5mA), immunity level 13V at 1.5mA. Contacts or PNP outputs from PLC

Thermal image I2t, adjustable (3s \pm 30s) with duty cycle 1/20; can be disabled. Standard overloading 1.5x In for 30 sec.

Optically isolated outputs for the protective devices, loading capacity 30mA/35V max

Serial output for connection with alarms receiver Rx8

Relay output 5A/220V load R, 3A/220V load RL

Available outputs + 15V/20mA, -15V/20mA, + 24V/100mA

Analog outputs for speed and current signals, with actual sign; \pm 10Vmax \pm 1mA max

Auxiliary circuits mounted as standard:

Speed ramp: 2 to 60 sec. (0.2 to 6 sec. In RAP), independent +a, -a, reset (RV)

Speed relay: adjustable from 0.5% to 120% (NR)

Check for field failure: adjustable from 0.25% to 100% (MCE)

Thermal image I2t; total time adjustable from 3 to 30 s. Current from 50 to 100%

Prealarm relay

Mains check (CR) - Pulse suppression (SI) - Tacho generator alarm (ADT) - Check for switching on and solid-state fuse alarm (CA+AF) - Armature transducer (TV) - Proportional amplifier (1/2 AP2)

4 QUADRANT FULL CONTROLLED SINGLE PHASE DRIVES FOR D.C. MOTORS – SERIES CM

APPLICATIONS

- Bidirectional drives for small and medium power D.C. motors
- Processing lines for plastic and rubber materials extruders, pinch roll trains, winding machines.
- Metal wire and sheet working machines, shears, cutters, spooling machines, strading machines.
- Paper product making and packing machines, packaging industries.
- Printing machines, including silk screen, offset.
- Positioning gauges, transfer.

MAIN FEATURES

- Full standardization design philosophy
- Standard control board with SMT technology
- Optimum power, size, performance and cost ratio
- Direct connection to single phase mains with wide tolerance ($\pm 20\%$)
- Selection of the full range current in binary code (4 bit)
- Selection on terminal board for main 220, 380, or 240, 440, 480 $\pm 20\%$
- Galvanic insulation, also in armature feedback, with compensation Rxl
- Double slope speed ramps, selectable and with separate zeroing
- Adjustable speed relay (0,5 ÷ 120%)
- OK relay cumulative of all the protective devices 'DRIVER OK'
- Thermal overload prealarm relay (I2t). Electronic thermal images
- Provision for setting (1,5 x In per 30 s.) and disabling overload
- Commands for controlling reference and functions, with LED signalling
- Analog current and speed outputs
- Standard built-in protective devices (controls of mains and internal power supplies, solid state and/or electromechanical fuse alarm, tacho generator failure, field circuit checking disabling by external command, overtemperature) all with LED signalling.

1.0 GENERAL DESCRIPTION

The compact modular construction uses standard PC boards for the entire range. The high level of integration of the components mounted, made possible to have a series with practically all the most frequently used system auxiliary functions.

Through external commands (contacts or PLC commands signalled by LED's), it is possible to have full control over the switching of the reference signals, Forward/Reverse commands and use of the ramp. All protective devices are memorized individually and signalled by LED's.

The PC board is standard. A special thermal calculation circuit allows both overloading (30s) and boosted continuous service, which is useful for current regulator in 'pull mode' with unit torque (torque controls). The drive is built according to IEC standards 146, IEC 326, VDE 110b, CEI 494-CT22-2 and the ANIE recommendations. The drive is rated for mains power supplies up to 500V $\pm 10\%$.

All auxiliary fuses (field, regulation) are internally mounted. Power fuses are externally mounted.

2.1 INTERNAL PROTECTIVE DEVICES

- Fuses for the field bridge (2)
- Fuses for the control circuit (1)
- Checking of firing of each single SCR, solid-state fuse alarm, with provision for optional external additional electromechanical checking (AF) and provision for disabling.
- Check for mains tolerance, missing phases, mains failure, presence of -15V
- Checking for tacho generator failure
- Checking of field circuit by means of adjustable transducer; provisions for disabling by command

- Thermal overload protection through thermal element on the radiator and calculation of thermal image limit
- Signalling of prealarms through relays at 80% of time limit of thermal images

2.2 STATUS LED ON BARGRAPH

- PW: power alarm (mains, fuses)
- TG: tacho generator alarm
- FC: field circuit checking
- TH: thermal alarm (thermostat/I2t)
- MP: positive modulator (forward bridge)
- MN: negative modulator (reverse bridge)
- I>In: start of thermal image calculation
- I2t: thermal prealarm
- N#0: speed relay
- OKD: driver OK (alarm cumulative)

3.0 CONTROL BOARD RR2 CARD

- Fully standard for all ranges
- Available presetting AR/DT, JCR/JSR, RV1/RV2
- 4-positions dip switches for programming and/or disabling certain protective devices or commands

4.0 POWER SECTION PR2 CARD

- Full controlled single phase 4+4 SCR's in anti-parallel, complete with single RC filters and protection against overvoltage and dv/dt
- Boards with filters, auxiliary fuses and insulating transducers for armature and field

5.0 TECHNICAL DATA

- Standard supply voltage for control circuit 220, 380, or 240/440, or 240/480 $\pm 20\%$ with selection on terminal board (200 $\pm 10\%$, 235 $\pm 10\%$, 240 $\pm 20\%$, 415 $\pm 10\%$, 420 $\pm 15\%$, 460 $\pm 15\%$, 500V $\pm 10\%$).
- Standard power circuit supply voltage 415V $\pm 10\%$ max
- Max voltage 500V $\pm 10\%$ (upon request, for CM44...CM48)
- Frequency 50Hz $\pm 4\%$ or 60Hz $\pm 4\%$ (set by SW 1-4)
- Ref. ambient temperature: 0° to 45°C effective (inside the control panel)
- Max operating temperature: 65°C with derating of 1,25% for each degree from 45° up to 65°C
- Storage temperature range: da -25° a +85°C
- Relative humidity $\leq 50\%$ without condensation
- Altitude ≤ 1000 m.a.s.l. with derating of 1,2% for every 100m above this altitude
- Max form factor 1,2
- Field circuit supply voltage 2 x 415V $\pm 10\%$ max, with single phase bridge, complete with fuses, transducer, protective devices. Max current 2,5A.
- Adjustment characteristic: double closed loop in series, for current (TA) and speed (DT) or voltage
- Typical range of adjustment 1/100 with tacho gen. feedback or 1/10 with armature feedback and RXI compensation.
- Static speed error with tacho feedback and transient finished and excluding the speed transducer errors
- $\pm 0,01\%$ of max speed for load variation from 5% to 100%
- $\pm 0,05\%$ of actual speed for mains fluctuations of $\pm 20\%$
- $\pm 0,01\%$ of actual speed for each degree in ambient temperature change from 0° to 65°C
- Internal reference voltage $\pm 10V \pm 2\%$ 10mA max
- Reference potentiometer: standard value 5K (da 1K a 10K)
- Input impedance of reference signal: 200K $\pm 2\%$ (0,05mA typical)
- Positive logic commands (standard $\pm 24V \pm 20\%$ 5mA) immunity level $\geq 13V$ at 1,5mA. Contacts or PNP outputs from PLC
- Thermal image I2t with duty cycle 1/20; can be disabled. Standard overloading 1,5xIn for 30sec.
- Relay outputs 5A/220V load R, 3A/220V load RL
- Available outputs: +15V/10mA, -15V/10mA, +24V/30mA
- Analog outputs for speed and current signals, with actual sign: $\pm 10V_{max}$, $\pm 4mA_{max}$
- Auxiliary circuits mounted as standard
- Speed ramp: 3÷90 sec., $\pm 20\%$ (or 0,3÷9 sec., or 3ms.÷0,1sec.) independent +a, -a, independent stop
- Speed relay: adjustable from 0,5% to 120% with trimmer
- Check of field failure: adjustable from 100mA to 2,5A. Standard value 100mA $\pm 20\%$
- Thermal image I2t: total time 30sec. $\pm 20\%$ Prealarm relay

4-QUADRANT SCR BIDIRECTIONAL FULL CONTROLLED SINGLE-PHASE CONVERTER

APPLICATIONS

- reversible control of low power D.C. motors
- Silkscreen machinery
- Footwear machinery
- Copying machines
- Conveyors

MAIN FEATURES

- Direct installation on single-phase mains supply
- Excellent dimension/cost/performance ratio
- Operating range: from 5A to 10 A
- Independent circuit for the supply of the field circuit
- Internal fuses protection

GENERAL DESCRIPTION

The converter CM 220/5-9-16TR is intended for the reversible supply of low power D.C. motors. The output current is of 5A, 9A, 16A, while the max. output voltage is of 150V. It allows operation in the 4 quadrants, with 8 SCR static switching. An independent circuit for the supply of the field circuit is available. The protection with fuses of the power, field and control circuits is internal. The speed ramp circuit is standard supplied, and can be separately adjusted for the 2 directions of acceleration. A zero speed relay, analog current and speed output are, current limit analog input also available;

GENERAL DESCRIPTION

The converter CM 220/5-9-16TR is intended for the reversible supply of low power D.C. motors. The output current is of 5A, 9A, 16A, while the max. output voltage is of 150V. It allows operation in the 4 quadrants, with 8 SCR static switching. An independent circuit for the supply of the field circuit is available. The protection with fuses of the power, field and control circuits is internal. The speed ramp circuit is standard supplied, and can be separately adjusted for the 2 directions of acceleration. A zero speed relay, analog current and speed output are, current limit analog input also available;

TECHNICAL DATA

- Mains supply: 220V±235V±10% or 110V±10% on request. Frequency 50/60Hz internally adjustable (+ 4%)
- Operation temperature: between 0 and 45°C of actual room temperature (cabinet inside) at nominal current. Limit up to 65°C with 1,25% derating for each grade of temperature increasing from 45 to 65°C.
- Form factor: typical 1,2 (F.F.= Iactual./Iaverage)
- Armature voltage: 150V max. with 220V of power, generally you have: $V_{arm}=V_{supply}/1,45$
- Field voltage: 198V max. with 220V supply, and 210V with 235V supply.
- Field current: 1,5A max.
- Adjustment range: 1/200 with tacho-feedback; 1/5 with armature feedback. Please note: the RxI compensation is not possible.
- Reference voltage: internal, double regulation at +10V. Voltage variation of ±5% according to the rotation direction. Standard thermal stability ±0,1% for grade C; ±0,01% or ±0,001 upon request.
- Reference potentiometer: standard value 5Kohm. Value between 2÷10Kohm. Minimal power 0,5W
- Auxiliary input: is to be added up to the usual reference; Standard control range ±20% with $R_{aux}=1M\Omega$
- Max. speed control range: Min. input voltage 6V on request.
 - A) with potentiometer Nmax between 70V and 220V of input feedback EDT1.
 - B) Between 20V and 80V of input feedback EDT2.
- Min. speed control: through the trimmer Nmin it is possible to control between 0÷20% of the max. speed with reference potentiometer of 5Kohm.
- Speed ramp: separate acceleration and deceleration ramp, which can be adjusted between 0,3 and 10 sec. The exclusion is possible, on request, by obtaining times between 10 msec. and 0,3 sec. Change the capacity should you require longer times.
- Zero speed relay: with LED indicator and an exchange contact with the max. limit of 125V and capacity:
 - 120VA on resistive load 125Vmax
 - 60VA on inductive load 125Vmax

The tacho threshold is 1% of max. speed, while during the armature feedback it is active at about 3V.

CM22

HALF-CONTROLLED SINGLE PHASE CONVERTER

CM 220-9S

UNIDIRECTIONAL SINGLE-PHASE HALF-CONTROLLED

CM22

HALF-CONTROLLED SINGLE PHASE CONVERTER

CHARACTERISTICS

CM22 is a family of converters suitable for driving d.c. motors at wound field of low and medium power. They are available in the standard version for connection at single-phase main 230/400V \pm 10% 50-60 Hz, to be selected through jumper; on request also the CM25 is available, for connection at single-phase main 440 \div 500V \pm 10% 50-60Hz. CM22 can be supplied in three current sizes from 9 to 27A nominal with overload equal to 150% of the nominal for 30 sec. and with electronic thermal motor protection. CM22 has a mains jumper for the field supply of motor protected by extrarapid fuses and of circuit for field loss. Feedback motors both in armature or in tachodynamo can be driven, which can be connected to the converter without polarity constraints. The circuit of tacholack allows to eliminate overspeed conditions, which are not wished and which could be caused by accidental breaks of the cables coming from the dynamo itself. CM22 is in short a complete product with reference to the group to which it belongs, it can be easily configured through dip switches and jumpers, which allow the selection of main voltage, motor current, value of the armature or tachodynamo voltage. The modular structure allows to optimise the space inside the electrical cabinets and, thanks to the metallic covering, a good grade of noises immunity and a protection grade IP20 in the sizes 9A and 18A are reached.

CM 220-9S

UNIDIRECTIONAL SINGLE-PHASE HALF-CONTROLLER CONVERTER OPERATIONS ON 1 QUADRANT

APPLICATIONS

- Unidirectional control of low power d.c. motors
- Silkscreen machinery
- Footwear machinery
- Copying machines
- Conveyors

SPECIAL CHARACTERISTICS

- Direct installation on single-phase mains supply
- Excellent dimension/cost/performance ratio
- Operating range: from 2.5A-5A-9A
- Acc/dec ramps standard appliances on the CM 220/5S-CM 220/9S
- Internal selection of armature or tacho feedback
- Extreme flexibility of use

OPTIONS AVAILABLE ON REQUEST

- Zero speed relay (No) with change over contact on the terminal board (only for CM 220/5S-CM 220/9S)
- Levelling inductance for connection to d.c. side (indispensable for permanent magnet motors)
- Rack version for CM 220/2.5S and CM 220/5S

1.1. GENERAL DESCRIPTION

The CM 220/2.5-5-9S series is designed for the unidirectional power supply of low-powered direct current motors.

The output currents are 2.5A-5A-9A continuous, while the maximum output voltages are 170V for mains supplies of 220/Vac-50/60 HZ.

On request, other input voltages are available (110-48 Vac-50/60 Hz)

1.2. POWER UNIT

It is made up of a full wave half-controlled single-phase bridge with flywheel diode, complete with filters, fuses and protections. Unidirectional operations on one quadrant.

A self-powered field bridge is included. For the CM 220/9S power may be supplied externally to the control circuit and field bridge.

1.3. CONTROL UNIT

Series-connected double closed loop.

External speed (generator) or voltage (armature) loop.

Internal current (shunt) loop.

1.4. LED SIGNALLING

*LED1-ON - shows that converter is enabled (green).

*LED2-No - shows that motor is turning (red) (speed relay excited).

*only for CM 220/5S - CM 220/9S versions.

1.5. ADJUSTMENT TRIMMERS

Nmax=maximum speed

Nmin=minimum speed

Imax=maximum current

Stab.=stability

Rxl=internal drop compensation (only for CM220/5S CM 220/9S)

+ a / - a = acc/dec ramp on CM 220/9S

a = acc/dec ramp on CM 220/5S

2.1. TECHNICAL FEATURES

- a) Supply voltage: single phase 220 Vca $\pm 10\%$ 50/60Hz $\pm 4\%$
- b) Operating temperature: 0-45°. Limit up to 65° with 1.25% derating for each degree of temperature from 45° to 65°.
- c) Form factor: typical 1.2
- d) Armature voltage : max 170Vdc
- e) Field voltage : max 190Vdc
- f) Range of adjustment :
 CM 220/2.5S - 1/20 with tacho feedback
 1/10 with tacho feedback, without Rxl compensation
 CM 220/5S - 1/100 with tacho feedback
 1/10 with armature feedback and Rxl compensation
 CM 220/9S - 1/200 with tacho feedback
 1/20 with armature feedback and Rxl compensation
- g) Precision of adjustment :
 CM 220/2.5S - with armature feedback $\pm 10\%$ of the maximum speed
 with tacho feedback $\pm 2\%$ of the maximum speed, for variations of load
 (5%÷100%), supply $\pm 10\%$, and frequency $\pm 4\%$
 CM 220/5S-9S - with armature feedback $\pm 5\%$ of the maximum speed and Rxl compensation.
 with tacho feedback $\pm 0.2\%$ of the maximum speed for variations of load
 from 5 to 100%, supply $\pm 10\%$, and frequencies $\pm 4\%$, excluding tacho
 generator or tacho alternator errors.
- h) Reference potentiometer : value between 2 and 10 Kohm.

CH220 - CH22

UNIDIRECTIONAL MOSFET DRIVE

CHARACTERISTICS

CH220 and CH22 are unidirectional drives, which use mosfets as power elements. These drives are suitable for driving low power motors at wound field or highly efficient permanent magnets motors. They are available in the standard version to be connected to 110/220 \pm 20% 50-60Hz single -phase net, protected by extrarapid fuses (on request also the version 24/48V \pm 10% is available). The high commutation frequency (16KHz for CH220 and 10KHz for CH22) allows to obtain a very good form factor, even without using armature inductance. CH220 is available in three current sizes from 3 to 10A nominal with peak current of 150% of the nominal for 30 sec. and is able to drive motors with powers till 2Kw. CH22 is available in only one size with nominal current of 3.3A and peak current of 5A and is able to drive motors with max. power of 0.55Kw. Both families of products are manufactured in accordance with the product standard for power electronics EN 60146-1-1. Concerning the electromagnetical compatibility (EMC), CH220 and CH22 are immune from electromagnetical interferences in industrial environment in accordance with EN 50082-2 and respect the emission specifications in industrial environment in accordance with EN 50081-2 if they are coupled to an external filter and correctly installed in a system, as stated in the instruction manual.

ST

EUROCARD E1 ST SERIES TRANSISTOR PWM SERVO AMPLIFIER FOR D.C. MOTORS

GENERAL

- Single axis version incorporating power supply and clamp circuit
- Rack or panel mounting
- Optimum quality, size and cost ratio
- Compact design 3U/14TE

FEATURES

- 2KHz four quadrant PWM operation
- Motor voltage range from 10 to 80V
- Continuous current up to 4A
- Peak current up to 8A
- Internal armature feedback
- Thermal image and current limit
- Differential reference input
- 3 LED status indicators

Removable calibration board with surface mounting technology (smt)

MAIN FEATURES

The SCS Servocontrol of the ST series has been designed to drive small power, high performance permanent magnet motors. It features four quadrant reversible operation, while its internal clamp circuit ensures dissipation of inertial deceleration energy. The built-in fuse cuts off the power supply from the power bridge in the event of faults or short circuits.

The series ST Servocontrol is part of a system consisting of:

- Servo amplifier: in open-frame or connector version
- Minimum inductance: to guarantee a form factor of 1.005
- Single phase transformer with central socket: required for supplying the power and control circuits.
- Connector board RK16: for version with DIN 41612 connector; output with terminal board and PC board holder guides.

The following table gives details of the entire system supplied by SCS plus relative order codes:

Type	Transformer drop $\leq 5\%$			Minimum inductance				Converter		
								Nominal voltage	Armature current	
									IN	IP
	Type	Pow.W	Va.c.	Type	mH	IT	IS	V	A	
ST 24 - 4	TR01	200	25	L01	5	5	9	24	4	8
ST 48 - 4	TR02	350	42	L02	9	5	9	48	4	8
ST 65 - 4	TR03	475	57	L03	11	5	9	65	4	8
ST 80 - 4	TR04	580	66	L04	14	5	9	80	4	8

N.B.: To obtain the max r.p.m. at nominal torque ($I_{nom.}$), decrease the max motor voltages by the percentage no-load/load drop of the transformer, which is 5-6% on the average.

ADJUSTMENT TRIMMERS:

Maximum speed: through Nmax [P1]
 Maximum current: through IP [P2]
 Nominal current: through IN [P3]
 Offset: through AZZ [P4]
 Stability: through STAB [P5]

LED STATUS INDICATORS

LD1 (red) OK External enable
 LD2 (red) I2t Thermal image intervention
 LD3 (red) $\pm 15V$ Voltages present

GENERAL RULES

(Italian D.P.R. n.224 dated 24/05/88 - EEC Directive n.374/85)

This equipment should only be used, installed and adjusted by specialized and qualified personnel who are familiar with the construction and operation of both system and equipment, on the basis of the technical specifications of the product.

All the necessary precautions should be taken in the system where the product is used in order to safeguard the operator in the event of equipment failure.

SPECIFICATION

Supply voltage: through transformer 380/220v \pm 10% (see table on page 2).

Output current: continuous 4a

peak 8a for 2 sec. with pause of 10 sec.

Temperature range: from 0 to 45°C inside control cabinet

Range of adjustment: from 1 to 2000 with tacho feedback
from 1 to 20 with armature feedback

Form factor: 1.005

Static error (at transient depleted): with armature feedback \pm 1% of the maximum speed
with tacho feedback \pm 0.1% of the maximum speed.

Input voltage: \pm 10v

Input impedance: > 10 kohm

Internal reference voltage: \pm 10v; \pm 2%; 10 ma max

Enable signal: + 18v to + 30v, input current 5 ma a 24v

Available voltage: + 24v; \pm 20%; 5ma max

Speed setting potentiometer: range from 2 to 10 kohm. typical setting 5 kohm.

Weight: 500 grams

Dimensions: 100 x 160 x 71 (3u; 14te)

Armature feedback: internal from 10v to 80v.

Tacho feedback: 1 input for feedback from 12 to 60v (from 2.5v to 12v upon request) [edt2]
1 input for feedback from 60 to 240v [edt1]

Single-phase power supply transformer with back-panel (BPM)

When using a BPM back-panel (available in the 2 versions BPM48 or BPM80) it is possible to use a transformer with single-phase secondary and usual power supply voltage. Thanks to this particular rack no kind of current protection on the secondary of the transformer is necessary, as it is already included in the board.

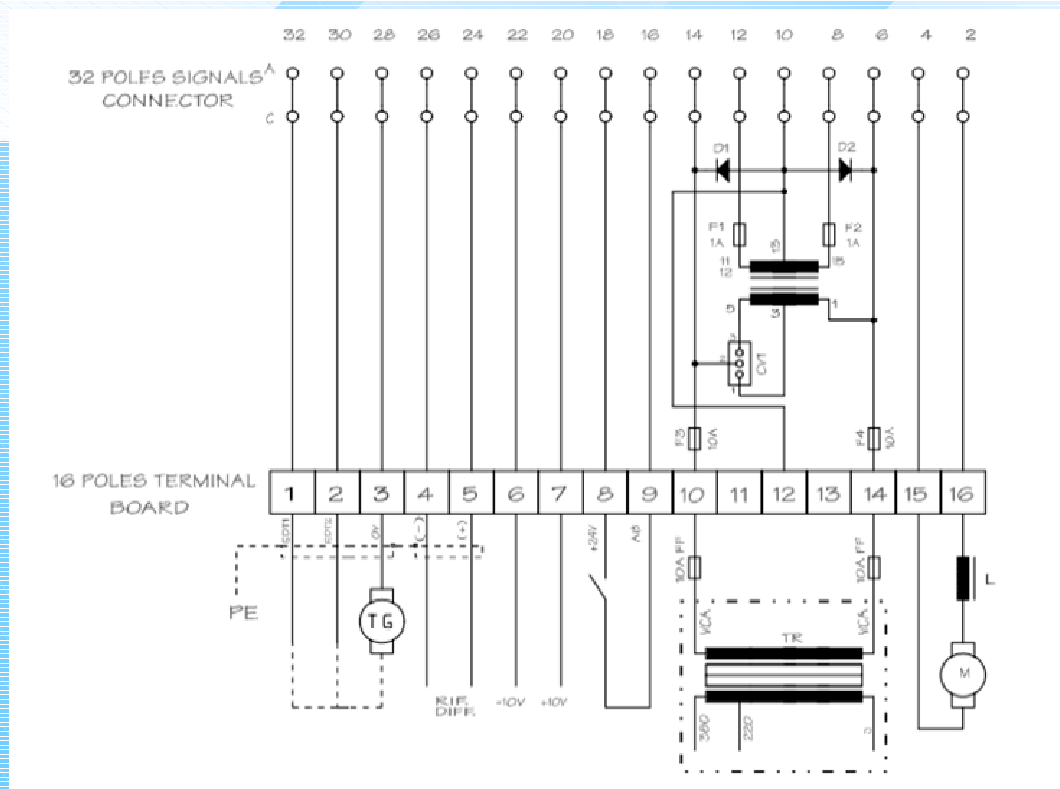

BPM use table

POWER	VCA	CONVERTER
200W	24V	ST24 - 4 / 8 TR
350W	42V	ST48 - 4 / 8 TR
580W	66V	ST80 - 4 / 8 TR

SM

EUROCARD E1 SERIES MOSFET PWM SERVO AMPLIFIERS FOR D.C. MOTORS

APPLICATIONS

- CNC machines, multi-axis systems
- Positioning drives, robots
- Transfer lines, winding machines, cutters

FEATURES

- 16 KHz four quadrant PWM operation
- for motors up to 1 KW
- single axis version incorporating power supply and clamp circuit
- rack or panel mounting
- LED diagnostics
- Removable calibration board with surface mounting technology (SMT)
- Wide motor voltage range 20V – 140 V
- Continuous current up to 10A
- Peak current up to 20A
- Compact design 3U/14TE

LED DIAGNOSTICS AND PROTECTION CIRCUITS

LD1 (green) Driver O.K., no protective device tripped, normally on.

The remaining red LED's are normally off. When lit up, it means their corresponding function is active. Current limiting is actuated without cutting off the driver (reversible protection).

LD2 STOP I²t current limit intervention (I_{peak} = I_{cont})

The lighting up of the following LED's signals which circuit has cut off the driver irreversibly, with the driver OK LED off; this is also signalled at output.

LD3 OVERUNDER V Overvoltage – undervoltage

LD4 BRAKE L²T Inertial load energy dissipation limit or clamp circuit fault.

LD5 OVER TEMP. Heatsink overtemperature (> 90°C)

LD6 POWER Shorts between outputs, or output and supply

M SYSTEM

The SM drives in their standard version are complete with power supply and clamp circuit. They require three phase voltage only supplied from a suitable transformer.

They can also be supplied in single phase versions with additional external capacitor (approx.1000 to 1500) µF for each ampere), as well as the versions running on continuous external supply or battery, which are without the braking device.

The SM series Servo Amplifiers are part of a system made up of the drive, transformer, inductance (if required) and the optionals for the various assemblings.

Plastic Board holder with terminal board connection.

Inductance.

The value given in table 1 is the one calculated for maximum voltage.

The current refers to thermal and saturation amperages.

MAIN FEATURES

The SCS MOSFET Servo Amplifiers of the new SM series have been designed to drive high performance d.c. motors. They employ the most up-to-date electronic circuitry for the servo amplifier and the diagnostics, there by optimizing the products as regards dimensions, features and price.

- ♦ Mosfet clamp circuit for dissipation of inertial load energy featuring resistor thermal image protection and output signalling.
- ♦ 2 KHz current loop passaband.
- ♦ Operation in speed mode or as current amplifier.
- ♦ Differential inverting/non inverting inputs ($\pm 10V$), input impedance 20 Kohm.
- ♦ 2 tacho generator inputs for voltage ranging from 2.5V to 240V.
- ♦ Motor on/off and protective device reset inputs (24V 5 mA) $\pm 10 V/20 mA (\pm 5\%)$ outputs, thermal stability $\pm 0.02\%^\circ C$.
- ♦ Overload time of 2 sec.
- ♦ Output with open collector (35V/30mA), drive O.K.
- ♦ Circuit for operation with armature feedback.
- ♦ Removable calibration board (Nmax, Ip, In, Offset, Stability) with SMT technology.
- ♦ LED diagnostics.
- ♦ Weight = 0.7 kg.
- ♦ Dimensions = 100 x 160 x 71 mm. (3U; 14TE); 100 x 160 x 90 (3U; 18TE).
- ♦ Natural air cooling
- ♦ Operating temperature range $0^\circ - 45^\circ C$ inside control cabinet.
- ♦ Max. temperature $65^\circ C$ inside cabinet with current derating of $1,5\%^\circ C$.

ELECTRICAL CHARACTERISTICS

Type	Max motor voltage (V) [2]	Supply voltage (V)	Cont./peak current (A)	3-phase transformer no load secondary voltage (V)	Min.load inductance			Width	Power losses [W]
					mH	AT/AS	Code		
SM 48-10... [1]	16-45	31-60	10/20	23-45	0.7	12/27	LM82	14TE	60
SM 65-8...	45-60	60-75	8/16	43-56	1	8/18	LM81	14TE	45
SM 80-7...	45-75	60-90	7/14	43-67	1	8/18	LM81	14TE	40
SM 140-5...	45-130	60-145	5/10	43-107	2	5/12	LM84	14TE	32
SM 110-9E1	45-96	60-110	9/18	43-82	1.5	9/20	LM86	18TE	52
SM 140-8E1	45-130	60-145	8/16	43-107	1.5	8/16	LM85	18TE	55
SM 160-10E1 [1]	55-137	70-152	10/20	52-113	0.7	12/27	LM82	18TE	75

NOTE 1: The sizes SM48-10 and SM160-10E1 supply rated current continuously till 35° room. For higher temperatures it is to be applied in current derating of $1,5\%^\circ C$.

NOTE 2: The max. armature average voltage (Varm) is only indicative, in order to couple the drive to the motor at the best, which allows to have still regulation margin; you can use the following practical formula to calculate the intermediate cases (of transformer):

$$V_{ca} = \frac{V_{ah} + 15}{1.35}$$

NOTE3: The values indicated are the ones, which guarantee the non-operation of protections, in the typical application with three-phase supplier, and that the regulation at max. number of revolutions and at full load (nominal torque equal to I nominal) still happens.

FULL-WAVE PHASE CONTROL CHARACTERISTICS

PM22

FULL-WAVE PHASE CONTROL CHARACTERISTICS

PM22 is a full-wave phase shifter, which uses as power element two antiparallel connected thyristors. Two current sizes are available (28A - 50A), with standard main voltage in class 230V (220-240V±10%) and class 400V (380-415±10%). Upon request we can supply products with voltages till 500V ±10%. PM22 is used for: the current and/or voltage control of resistive elements for the generation of heat, resistive elements with high inrush currents (e. g. quartz lamps), induction rotary heating elements, ohmic-inductive elements. The presence of current and/or voltage reaction signals and of two auxiliary inputs for possible corrections at the control system allows the realisation of different control typologies. Furthermore the values of load current and voltage are at user's disposal.

FULL-WAVE THREE PHASE CONTROL CHARACTERISTICS

GENERAL DESCRIPTION

This shifter allows to continuously change the load voltage from 0 to 100% approx.

The adjustment is obtained by means of a potentiometer and minimum and maximum speed are setted with a dedicated trimmer.

APPLICATIONS

- Ohmic load regulation
- Incandescent lamps
- Heaters
- Speed adjustment for helical fans
- Speed adjustment for high rotor resistance motors (Alquist)

MAIN FEATURES

- Direct installation on mains supply
- Excellent dimension/cost/performance ratio
- Operating range: from 8A to 12 A
- Internal fuses protection

PS 220/20S	220V	0 ÷ 220V	20A	7.6KW	7.7KW

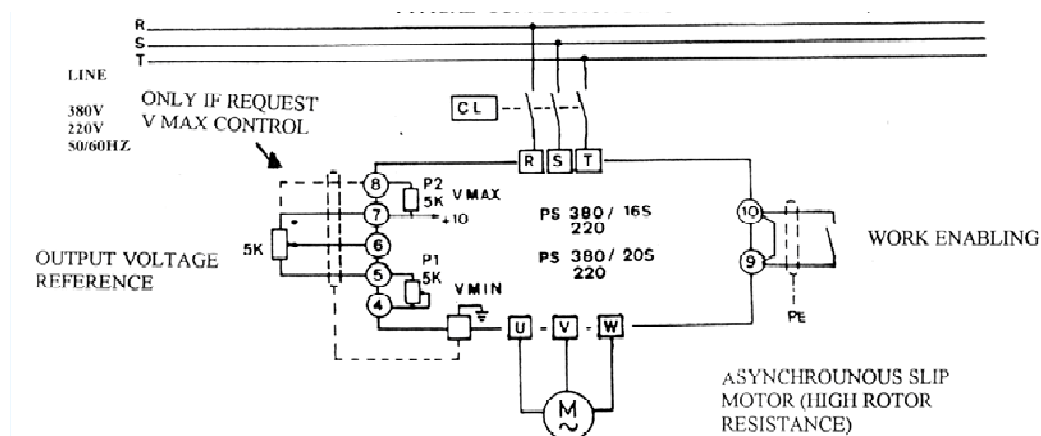

TECHNICAL DATA

- Mains supply: 220V±235V±20% or 110V±20%. Frequency 50/60Hz internally selectable
- Operation temperature: between 0 and 45°C at nominal current. 65°C MAX with 1,25% /°C derating from 45 to 65°C .
- Protection Degree: IP00 according to IEC144
- Internal fuses : 3x10/16 A - 380V (500V) superfast 6,3 x 32
- Weight : 1,2 Kg
- External regulation: manual from 0 to 100% via potentiometer
- Aux outputs: 10V 5mA max , 24V 15mA
- Internal trimmers : minimum and maximum voltage , ramp time
